

# EUROPEAN FORESTRY HOUSE

## Centre of Competence for Forestry Issues

The European Forestry House is recognised as the centre of European forest competence and expertise in forest-related issues in Brussels, providing a venue for forest-related events and a hub for European forest and wood experts. It serves as a platform to promote sustainable forest management as well as the economic viability of the forest sector, forest and wood research and innovation, and the use of wood for furniture and construction. The organisations which have their offices at the European Forestry House are all directly related to forestry and the forest-based sector. Together they create synergies and promote the exchange of relevant ideas and information.
